Explanations

d = Inner diameter (decimal notation)	T = Transmissible torque at given T _A	T_A = Tightening torque of the clamping screws
d = Inner diameter	F_{ax} = Transmissible axial force	G_w = Weight
D = Outer diameter	p_w = Surface pressure on shaft at given T _A	
L = Overall length	p_N = Surface pressure on hub at given T _A	
L₁ = Overall length (without screws)	n_{sc} = Quantity of screws	
L₃ = Width of ring	D_G = Thread	

Ordering example

Locking Assembly	d	D

Technical Information

- The values for T, F_{ax}, p_w and p_N apply to Locking Assemblies installed in oiled condition.
- Surface finishes: Shaft bore R_a ≤ 1,6 μm · Hub bore R_a ≤ 3,2 μm
- Tolerances: Shaft: h8 · Hub: H8
- The outside diameter of the hub is calculated with factor C3 = 0.6. (see chapter „Calculation“ in Product Paper & Tech Paper „RINGFEDER® Locking Assemblies“).
- A reduction of the contact pressures and the transmission values by reducing the tightening torque of the screws is possible. Please contact our specialists for assistance.
